SUSPENSION KIT

SUSPENSION KITS	Load	Est. Lift		
Foam Cell Suspension Kit	Light		**FOR010AKF**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Nitro Gas Suspension Kit	Light		**FOR010AKG**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Monotube IM2.5 Suspension Kit	Light	50mm	**FOR010AKM**	1
Contents: Monotube Shock Absorbers, Coil Overs Strut Assemblies, Leaf Springs, Bump spacer Kit, U-bolts, Urethane Bush Kit				
Foam Cell Pro Suspension Kit	Light		**FOR010AKP**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Foam Cell Suspension Kit	Medium		**FOR010BKF**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Nitro Gas Suspension Kit	Medium		**FOR010BKG**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Monotube IM2.5 Suspension Kit	Medium		**FOR010BKM**	1
Contents: Monotube Shock Absorbers, Coil Overs Strut Assemblies, Leaf Springs, Bump spacer Kit, U-bolts, Urethane Bush Kit				
Foam Cell Pro Suspension Kit	Medium		**FOR010BKP**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Foam Cell Suspension Kit	Heavy		**FOR010CKF**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Nitro Gas Suspension Kit	Heavy		**FOR010CKG**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Monotube IM2.5 Suspension Kit	Heavy		**FOR010CKM**	1
Contents: Monotube Shock Absorbers, Coil Overs Strut Assemblies, Leaf Springs, Bump spacer Kit, U-bolts, Urethane Bush Kit				
Foam Cell Pro Suspension Kit	Heavy		**FOR010CKP**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Foam Cell Suspension Kit	Extra Heavy		**FOR010DKF**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Nitro Gas Suspension Kit	Extra Heavy		**FOR010DKG**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.				
Monotube IM2.5 Suspension Kit	Extra Heavy		**FOR010DKM**	1
Contents: Monotube Shock Absorbers, Coil Overs Strut Assemblies, Leaf Springs, Bump spacer Kit, U-bolts, Urethane Bush Kit				
Foam Cell Pro Suspension Kit	Extra Heavy		**FOR010DKP**	1
Contents: Strut Shock Absorbers, Shock Absorbers, Coil Springs, Leaf Springs, U-Bolts, Polyurethane Spring Bushes, Centre Bearing Spacer Kit. Possible driveline vibration may occur due to increased ride height. Use 1223K to reduce vibration to a satisfactory level.

SUSPENSION SELECTION AND INFORMATION

Effective 1 June 2024

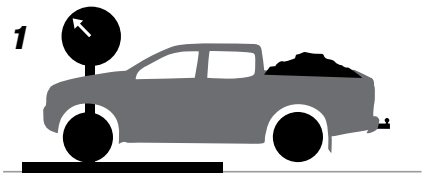

IRONMAN 4X4

Understanding Load

Suspension is not something you often see when you first look at a vehicle. But when you need it, suspension can be the single most important upgrade you make. Original equipment suspension is set up to support your vehicle for on-road conditions with a reasonable amount of weight.

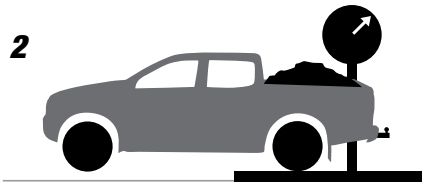

When you start to add vehicle accessories, attach a trailer or caravan and increase your load, the way the suspension handles the load changes. Couple that with uneven surfaces and off-road conditions, the OEM suspension can no longer take the additional strain.

LOAD DISTRIBUTION

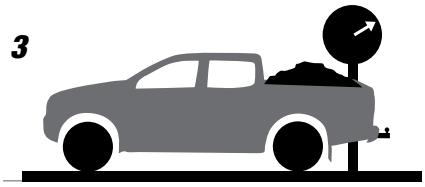

Load placed over the front half of the vehicle determines front spring selection

Ensure total weight does not exceed manufacturers axle load limit

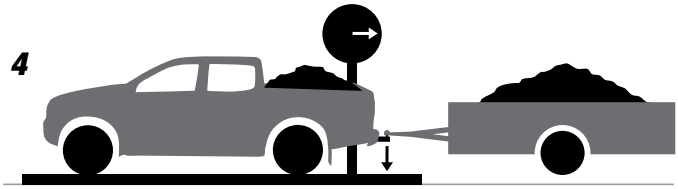

Load placed over the rear half of the vehicle determines rear spring selection

Ensure total weight does not exceed manufacturers axle load limit

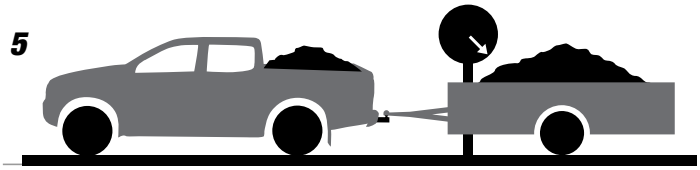

1 + 2 = Total weight of vehicle

Ensure total weight does not exceed manufacturers GVM (gross vehicle mass)

Vehicle with trailer connected minus total weight of vehicle = Ball weight

Ensure total weight of vehicle including ball weight does not exceed manufacturers GVM

Total weight of vehicle plus trailer weight = GCM (gross combined mass)

Ensure total weight of vehicle and trailer does not exceed manufacturers GCM

Please note: Not all springs are available in green and some may be supplied in yellow. Please check before ordering.

Determining Load

STEP ONE LOAD?

When your load changes, so should your springs.

Any heavy accessories or towing load added to your vehicle, changes the handling and overall safety when driving. The vehicle's springs must be matched to the load for optimum ride height and body control. IRONMAN 4X4 offer a range of springs to match the additional loads whether they are constant or temporary.

When you start kitting out your vehicle, take into consideration the kerb weight and how much load you are adding, this will change what level of strength you need. Remember, you cannot exceed your GVM, but you might be able to upgrade it. (See page 363 for GVM upgrade information)
IRONMAN 4X4 offer a range of springs matched to cater for every load scenario. To identify your spring type, start by finding your kerb weight and add your load, permanent and temporary. How much load have you added to your vehicle?

LIGHT [A]	MEDIUM [B]	HEAVY [C]	EXTRA [D]	SUPER [E]
Soft rate for small or no load	Increased rate for moderate or changeable loads	Heavy rate for big loads	Strong rate for heavy accessories and loads	Maximum rate for heavy accessories and full load

PART NUMBER SUFFIX S - Standard Height (eg. TOY063S)
Available for selected applications to provide enhanced performance at original vehicle manufacturers ride height.

PART NUMBER SUFFIX A - Light (eg. TOY047A)
Suitable for zero to light load applications, higher priority toward - Comfort with minimal increased ride height.

PART NUMBER SUFFIX B - Medium (eg. TOY047B)
Suitable for use in zero to medium load applications, ideal for moderately accessorised vehicles or occasional load.

PART NUMBER SUFFIX C - Heavy (eg. TOY047C)
Suitable for vehicles with permanent heavy accessories, higher priority towards load support, provides more control and firmer suspension.

PART NUMBER SUFFIX D - Extra Heavy (eg. TOY047D)
Suited only to vehicles with permanent heavy accessories combined with heavy additional load.

PART NUMBER SUFFIX E - Super Heavy (eg. TOY047E)
Maximum support for extra heavy loads typically commercial or mining use vehicles.

All lift heights quoted within this catalogue are general estimates only, relative to new vehicle ride height. Suggested lifts are based upon the lighter of the recommended additional load. The position of added weight can affect the result.

Understanding Terrain

STEP TWO TERRAIN?

The terrain you travel most, determines what type of shock absorber is right for you! Forces generated by a loaded vehicle in rough terrain versus a lightly loaded vehicle in smooth terrain differ greatly and can be considerably higher.

Creating safe and appropriate dynamic handling at higher than original weights requires careful consideration. The range of IRONMAN 4X4 shock absorbers are designed to cover all terrains and possess the correct amount of damping resistance to provide a safe and comfortable ride.

Easy Terrain

NITROGAS

SMOOTH ROUGH

Nitro Gas

The Nitro Gas shock is the best value for affordable performance in all common conditions.

Highly versatile, the shock is a big step up above OEM suspension in performance and control.

- 35mm piston
- 54mm body
- 16mm piston rod
- Twin tube construction
- Nitrogen gas pressurised

Adventurous Terrain

FOAMCELL

SMOOTH ROUGH

Foam Cell

The Foam Cell shock will enhance your off-road durability and performance while still maintaining excellent on-road characteristics.

Excels in off-road conditions where heat build-up is a concern, the Foam Cell shock is larger in size and holds more oil, providing a better dissipation of heat and longer lasting performance in all terrains.

- 40mm piston
- 60mm body
- 18mm piston rod
- Twin tube construction
- Foam cell technology

Demanding Terrain

FOAMCELL PRO

SMOOTH ROUGH

Foam Cell Pro

Foam Cell Pro shock, the premium shock, built to handle anything.

Originally designed to meet the demands of the armoured vehicle industry where reliability and durability are critical.

Foam Cell Pro is the ultimate shock when the going gets tough. Thicker and stronger than any other shock on the market, it's well suited to trades, fleet and serious off-roaders.

- 45mm piston
- 65-72mm body
- 20mm piston rod
- 3mm wall thickness
- Twin tube construction
- Foam cell technology

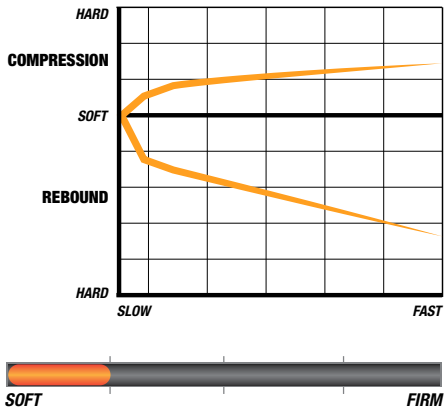

Understanding Valving

STEP THREE RIDE STYLE?

Your preferred ride style is important to know when selecting the level of valving resistance in your shock absorbers. IRONMAN 4X4 shock absorbers adapt to the velocity of the compression and rebound stroke which provides the right amount of control to suit your driving style.

Comfort Valving

GRC FEC FEC PRO

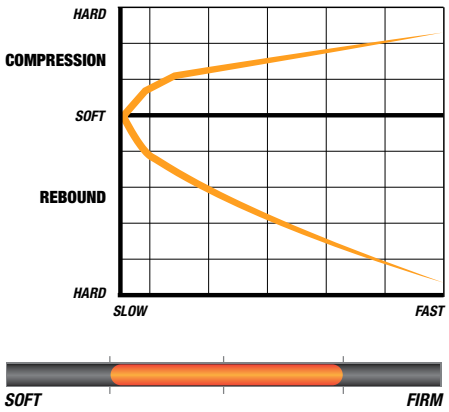

Soft Ride - Lightly Accessorised

The comfort range delivers smooth handling and less harshness for everyday use. Best suited to lighter vehicles without load, the shocks prioritise a soft comfortable ride, above all else.

Performance Valving

GR FE FE PRO

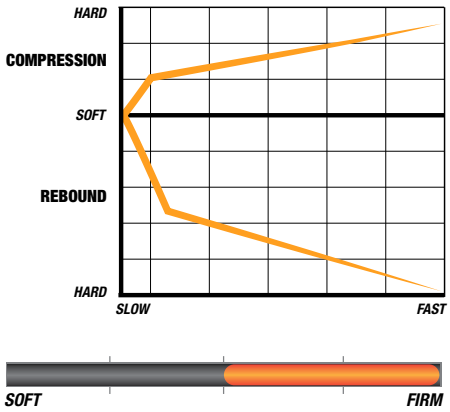

Versatile Ride - Moderately Accessorised

The performance range adapts to a wide range of driving styles. Best suited to moderately loaded vehicles with some accessories, the shocks provide a balanced comfortable ride with more control.

Professional Valving

GRP FEP FEP PRO

Strong Controlled Ride - Heavily Accessorised

The professional range controls body roll and reduces pitching while driving over all terrains. Best suited to heavily loaded vehicles with a higher centre of gravity, the shocks focus on maximising control and stability.

Understanding GVM Upgrades

GVM UPGRADE REQUIRED?

If loads exceed the axle limits or gross vehicle mass (GVM) stated by the original vehicle manufacturer, a certified increase in GVM will be required.

IRONMAN 4X4 design and manufacture a range of approved GVM upgrades for a selection of vehicles, which comply with federal and state regulations (Australia and NZ Only). See pages 373 -386 of this catalogue.

Comprehensive testing is conducted by IRONMAN 4X4 and independent engineers to ensure maximum safety, performance and ADR compliance at the increased load carrying capacity.

IRONMAN 4X4 has obtained Second Stage Manufacturer (SSM) status through the Department of Infrastructure Regional Development and Cities in Canberra GVM Upgrades are available through selected IRONMAN 4X4 Australian and NZdistributors only.

ADDITIONAL LOAD

Use the below guide to estimate the additional load in the vehicle. Calculate the load separated over each axle to determine the nearest spring selection based on the recommendations given within the vehicle application pages. Please Note: Weights quoted below are supplied as an approximate guide only.

Bull Bar Aluminium	**+40kg**
Bull Bar Steel	**+60kg**
Winch With Synthetic Rope	**+25kg**
Winch With Steel Cable	**+45kg**
Spare Wheel Additional	**+50kg**
Rear Bar Steel	**+65kg**
Canopy ABS Plastic	**+80kg**
Drawer System 1300mm Twin Drawers	**+90kg**
Battery Additional	**+25kg**
Fridge 50 Litre	**+30kg**

Fuel Tank Extended Capacity	**+90kg**
Roof Rack Steel 2200mm Tent Rack	**+45kg**
Rooftop Tent Including bedding	**+65kg**
Water Tank 100 Litres	**+100kg**
Tray -100kg Aluminium	
Tray Steel	**+400kg**
Tool Box Average	**+100kg**
Passenger Average	**+80kg**
Luggage	**+100-300kg**
Towing	**+100-300kg**
Large Overhang	**+30%**

Vehicles with large rear overhang such as tray or service bodies may amplify loads by approximately 30%.

Suspension Kits and Correct Selection

IRONMAN 4X4 suspension kits are a simplified way to select the appropriate components for a vehicle. Many vehicles have different suspension requirements according to added load, terrain and driver preferences.

To establish the correct suspension kit, we ask the following questions:

1) What is the primary usage of the vehicle?
2) What accessories are on the vehicle?
3) What additional loads are within the vehicle and how often are the loads present?
4) What is the primary driving terrain?

The IRONMAN 4X4 suspension kit part numbering system is designed to be read as follows:

TOY047CKP1

TOY047	C	K	P	1
An internal company prefix used to specify the vehicle model	Indicates spring selection **S** Standard *(Standard Height)* **A** Light *(Comfort)* **B** Medium *(Performance)* **C** Heavy *(Constant Load)* **D** Extra Heavy *(Extra Constant Load)* **E** Super Heavy *(Extra Heavy Constant Load)*	Implies this is a suspension kit	Indicates shock absorber selection **G** Nitro Gas **F** Foam Cell **P** Foam Cell Pro	Is used in some instances to define a variant of a vehicle

Generally, as no two vehicles are alike, customising a suspension kit is recommended and can be discussed with the IRONMAN 4X4 team.

For example, a vehicle with heavy load over the rear axle only, does not require constant load front springs, in this case a lighter front spring and heavier rear spring is the best choice.

Features and Benefits

NITRO GAS SHOCK ABSORBERS

Gas Pressurised shock absorber boosts performance and adapts to a wide range of driving styles

NITROGEN GAS PRESSURISED - Low pressure nitrogen gas dramatically reduces the likelihood of oil aeration and shock fade.

35mm TEFLON BANDED PISTON - Precision shim-stack piston specifically valved by Ironman suspension engineers, banded with teflon for smooth long life operation.

54mm TWIN TUBE BODY - Increased oil volume for improved cooling and endurance, Twin tube construction protects internal components from rock damage.

16mm – 18mm HARD CHROME PISTON ROD - Hardened and polished, volumetrically balanced to piston size.

FLEXIBLE RUBBER BUSHES - Offers quieter operation and reduces damaging side loads from shock absorber.

TRIPLE-LIP HIGH PRESSURE NOK SEAL - Maximum gas and oil retention ability to withstand high displacement offroad use.

SUPPLIMENTARY WELDED MOUNTS - Fusion welded and supplementary welded for maximum strength and reliability.

SINGLE PIECE BILLET EYE RINGS AND STEMS - Ultra robust design prevents breakage or bending of mounts.

VEHICLE SPECIFIC VALVING - Every part number is specially valved for each vehicle application, this ensures the best possible ride and handling as intended by Ironman suspension engineers.

LONG TRAVEL - Suitable for standard and raised height vehicles, additional length increases wheel articulation.

IMPACT RESISTANT STONE SHIELD - Steel or Polyethylene dust shield protects piston rod from impacts and road debris.

FOAM CELL SHOCK ABSORBERS

Premium shock absorber for superior endurance in all conditions

FOAM CELL TECHNOLOGY - Micro-Cellular closed cell foam insert maximises cooling efficiency by occupying less internal space than gas within a pressurised shock absorber. Greater oil capacity and more surface area maintains lower operating temperatures.

40-45mm TEFLON BANDED PISTON - Precision shim-stack piston specifically valved by Ironman suspension engineers, banded with teflon for smooth long life operation.

60-72mm TWIN TUBE BODY - 50%-100% more oil volume than a gas shock absorber for superior cooling and endurance. Twin tube construction protects internal components from rock damage.

18-20mm HARD CHROME PISTON ROD - Hardened and polished, volumetrically balanced to piston size.

FLEXIBLE RUBBER BUSHES - Offers quieter operation and reduces damaging side loads from shock absorber.

TRIPLE-LIP HIGH PRESSURE NOK SEAL - Maximum oil retention ability to withstand high displacement offroad use.

SUPPLIMENTARY WELDED MOUNTS - Fusion welded then supplementary welded for higher strength and reliability.

360° WELDED MOUNTS - Fusion welded then fully welded around mounting for maximum strength and reliability.

SINGLE PIECE BILLET EYE RINGS AND STEMS - Ultra robust design prevents breakage or bending of mounts.

VEHICLE SPECIFIC VALVING - Every part number is specially valved for each vehicle application, this ensures the best possible ride and handling as intended by Ironman suspension engineers.

LONG TRAVEL - Suitable for standard and raised height vehicles, additional length increases wheel articulation.

IMPACT RESISTANT STONE SHIELD - Steel or Polyethylene dust shield protects piston rod from impacts and road debris.

COIL SPRINGS

Available in a wide range of load ratings to maintain optimum ride height

COLD COILED - CNC cold coiling ensures perfect consistency and accuracy, less heat during manufacture maintains material properties resulting in longer life.

BAR PEELED - Bar peeling is the process of forming the material to an exact size before coiling, this ensures the diameter remains constant and free of flaws along its entire length.

SHOT PEENED - Manipulates material surface tension to reduce stress, greatly enhances spring life.

TRIPLE SCRAGGED - Each coil is fully compressed to a solid state 3 times to minimise coil settling.

PROGRESSIVE AND LINEAR RATE - Used in accordance to original vehicle manufacturers preference, progressive springs increase rate as the spring compresses, linear springs maintain a consistent rate throughout its range.

POWDERCOATED - All springs are electro-static powdercoated for a durable finish.

LEAF SPRINGS

Available in a wide range of load ratings to maintain optimum ride height

INTER LEAF LINERS - Used in some applications to lower friction between leaves reducing noise and improving - Comfort.

LINED BOLT CLAMPS - All Ironman springs feature bolted guide clamps for greater flex, the addition of anti-friction liners ensures noise free smooth operation.

SHOT PEENED - Manipulates tension side of material to reduce stress, greatly enhances spring life.

DIAMOND CUT LEAVES - Distributes load at the leaf tip and reduces interleaf friction.

MILITARY WRAP - Where applicable, an additional wrap around the leaf eye protects from failure in case of damage.

Features and Benefits

TORSION BARS

Higher spring rate to support extra weight from additional vehicle accessories

UP-SET FORGED ENDS - Stronger than machining alone, forging manipulates steel grain for superior strength and durability.

PREMIUM MICRO-ALLOY STEEL - Exceeds OEM steel grade for ultra long life and less sag.

INCREASED BAR DIAMETER - Higher spring rate better supports added accessories and balances front and rear suspension performance.

X-RAY EXAMINED - Each and every Ironman Torsion Bar is X-Ray tested to eliminate risk of breakage due to material flaw.

DIRECTIONAL PRE-SETTING - Torsion Bars are rotationally pre-set in their direction of installation to reduce spring settling. Each bar is marked for left or right fitment.

POLYURETHANE BUSHES

Provide precise spring location and enables lubrication to increase suspension flex and - Comfort

INJECTION MOULDED POLYURETHANE - High density injection moulded polyurethane material ensures precise location and a durable bearing surface for your leaf springs, making them very durable in hot temperatures whilst providing a soft - Comfortable vehicle ride.

GREASABLE - Polyurethane bushes are greasable to aid in longer life and ensure smooth ride and quiet operation.

SPIRAL BORE AND FLANGES - To distribute lubricating grease evenly throughout the bushing surface when combined with greasable shackles and pins.

SPLINES - Allows the bush to conform to irregularities and grip to the eye surface.

GREASABLE SHACKLES AND PINS

Enables easy re-greasing of polyurethane spring bushes

QUAD-OUTLET GREASABLE - Greasable shackles provide an easy method of re-lubricating polyurethane bushes. Chamfered Quad-Outlet ports distribute grease liberally along the bush surface.

SERVICEABLE - All Ironman shackles and pins feature a serviceable bolt together construction.

ANTI-INVERSION SHACKLE - On selected models, a third pin is positioned on the shackle to protect the spring in the case of inversion.

CASTER CORRECTION PLATES

Used to correct caster angle after raising suspension beyond 100mm (4")

PRE-CONFIGURED CASTER CORRECTION - Fixed 5 degree offset models suit 100mm (4") to 150mm (6") lifted suspension.

STEERING DAMPER

Reduce unwanted vibration and feedback through steering system in rough conditions

FOAM CELL TECHNOLOGY - Micro-Cellular closed cell foam insert allows for the horizontal mounting orientation required by a steering damper.

35mm TEFLON BANDED PISTON - Precision shim-stack piston specifically valved by Ironman suspension engineers, banded with Teflon for smooth long life operation.

54mm TWIN TUBE BODY - Increased oil volume improves cooling and endurance, twin tube construction protects internal components from impact damage.

SUPPLEMENTARY WELDED MOUNTS - Fusion welded and supplementary welded for maximum strength and reliability.

SINGLE PIECE BILLET EYE RINGS AND STEMS - Ultra robust design prevents breakage or bending of mounts.

VEHICLE SPECIFIC VALVING - Every part number is specially valved for each vehicle application, this ensures the steering operation is smooth and unhindered by the effects of rough road driving.

CASTER CORRECTION BUSHES

Available in adjustable or fixed offset designs, used to correct caster angle after raising suspension under 100mm (4")

PRE-CONFIGURED CASTER CORRECTION - Fixed 2 degree offset models suit 50mm (2") lifted suspension.

ADJUSTABLE CASTER CORRECTION - Adjustable offset suit a wide range of lift heights up to 100mm (4")

HIGH DENSITY MATERIALS - Vehicle specific rubber or polyurethane material.

ADJUSTABLE PANHARD RODS

Used to correct axle shift after raising suspension. Adjustable as required to re-centralise axle to vehicle

COMPETITION SPEC - 32mm solid rod used throughout.

FINE THREAD ADJUSTMENT - M32 x 2mm thread ensures precision adjustment for greater accuracy.

OEM STYLE RUBBER BUSHES - Maximum flex and durability. Replaceable OEM style bushes.

EXTENDED SWAY BAR LINKS

Recalibrates sway bar index after raising suspension.

VEHICLE SPECIFIC BOLT ON DESIGN - Easy fitment, utilises OEM mounting locations.

ADJUSTABLE LENGTH - Adjustable extension where possible depending on vehicle model.

PRACTICAL DESIGN - Strongest construction up-spec materials to avoid bending and breaking. Rubber bushes and aircraft grade spherical bearings used where possible depending on vehicle model.

Features and Benefits

POLYURETHANE COIL SPRINGS SPACERS / TRIM PACKERS

Available individually to adjust "side to side" or "front to back" vehicle lean due to uneven load placement

INJECTION MOULDED POLYURETHANE - High density injection moulded polyurethane material ensures precise location and a durable seat with the spring.

PRE-CONFIGURED THICKNESSES - Varied thicknesses allow correct selection according to the amount of lean. Provides 1:1 ratio suspension lift on solid axle vehicles.

SELF LOCATING DESIGN - Raised profile locating flanges prevent packer from becoming dislodged or falling out.

STRUT TRIM PACKERS

For use only with IRONMAN 4X4 struts, available individually to adjust "side to side" or "front to back" vehicle lean due to uneven load placement.

PRECISE RIDE HEIGHT TUNING - Basic steel collar design fits over IRONMAN 4X4 struts to adjust spring seat height.

PRE-CONFIGURED THICKNESSES - Varied thicknesses allow correct selection according to the amount of adjustment required. Usually provides 1:2 ratio suspension lift on independent suspension vehicles.

EXTENDED BRAKE HOSES

Longer brake hose used with suspension lifts over 100mmm (4").

DOT SAE J1401 STANDARDS APPROVED CONSTRUCTION - OEM style reinforced rubber hose for safety.

EXTENDED LENGTH - Extended length allows for greater suspension travel.

ADJUSTABLE TRAILING ARMS

Used to correct rear axle tilt and location after raising suspension.

COMPETITION SPEC - 32mm solid rod used throughout.

FINE THREAD ON-VEHICLE ADJUSTMENT - M32 x 2mm thread ensures precision adjustment for greater accuracy.

OEM STYLE RUBBER BUSHES - Maximum flex and durability. Replaceable OEM compatible bushes.

CASTER WEDGES

Adjusts the caster angle within solid axle vehicles, or changes pinion angle to remove unwanted driveline vibration.

SUITS - 60-70mm wide leaf springs. Breakaway side section can be removed for narrower springs.

AVAILABLE IN - 1, 2, 3 and 4 degree increments.

SWAY BARS

Enhanced performance direct replacement sway bars featuring maximum bar diameter with factory compatible fitment.

SHORE A 70 DURO NR - Bushes maximum flex and durability.

ADJUSTABLE STEERING RODS

Adjustable length rod to centralise steering wheel after suspension lift.

ADJUSTABLE LENGTH - Compatible with all suspension ride heights.

STRONGER CONSTRUCTION - Reduces likelihood of failure due to impact.

BOLT ON STEERING DAMPER MOUNTS - Steering damper mounts can be positioned freely as required to suit suspension lift.

STRUT MOUNTS

Direct replacement for the OEM mounts. Facilitates the pre-assembly of complete new struts without disassembly of old unit.

FULLY OEM COMPATIBLE - Easy Installation.

SHORE A 80 DURO NR BUSHES & INSULATORS - Extended durability and precise location accuracy.

HEAVY DUTY WASHERS - Resists deformation in extreme use.

ADD-A-LEAF

Additional universal tapered leaf to upgrade existing leaf springs.

Eliminates suspension sag and supports additional load.

Improves - Comfort and handling.

Increases load carrying capability and ride height.

RUBBER BUSHES

Direct replacement for the OEM bushes, compatible with OEM and IRONMAN 4X4 suspension arms.

OEM STYLE RUBBER BUSHES - Easy press in replacement bushes, retains factory ride quality.

SHORE A 70 DURO NR - Maximum flex and durability.

PRO-FORGE CONTROL ARMS

Provides corrected wheel alignment and greater operating clearance, allows for the installation of larger tyres and further increases ride height.

HIGH STRENGTH FORGED ALLOY - Stronger and more durable than a cast, machined or fabricated arm.

BUSHES AND BALL JOINT - Replaceable with OEM compatible or genuine components.

Features and Benefits

SUSPENSION KITS

Fully integrated suspension kits containing all required components to achieve a safe and balanced suspension performance.

ALL LEAF SPRINGS KITS CONTAIN: Springs, Shock Absorbers, U-bolts and Bushes.

ALL COIL SPRINGS KITS CONTAIN: Springs and Shock Absorbers.

IRONMAN 4X4 also offer various optional components further enhancing suspension performance or geometry correction purposes, see vehicle listings for model specific details.

Such components include Greasable Shackles & Pins, Steering Damper, Caster Correction, Trim Packers, Suspension Arms.

COIL SPRINGS Pair with Existing Airbags	**2 Hours**
LEAF SPRINGS Pair	**2 Hours**
LEAF SPRINGS Pair with Existing Airbags	**2.5 Hours**

TORSION BARS Pair	**2 Hours**
STRUT SHOCK ABSORBERS Pair	**2 Hours**
SHOCK ABSORBERS Pair	**1 Hour**
STEERING DAMPER	**0.5 Hour**
CASTER CORRECTION BUSHES	**2 Hours**

All times to be used as a guide only, times may vary depending on experience and equipment. Pre existing modifications or accessories may also increase installation times. Always allow extra time for unforeseen issues or rusted components. Always use IRONMAN 4X4 Suspension Installation Form to record ride height before and after, vehicle and owner details.

WHEEL ALIGNMENT

SOLID AXLE Wheel Alignment	**0.5 Hour**

INDEPENDENT SUSPENSION Wheel Alignment	**1 Hour**

IRONMAN 4X4 recommend a wheel alignment be performed after installation or within 1 week, always ensure suspension is fully settled before wheel alignment.
As a minimum, toe settings will require adjustment after raising suspension.
Camber and Caster settings are an important aspect and should be maintained close to manufacturers specifications.
Consideration to road crown should be given.
It is advisable to induce slightly more (positive caster) and (negative camber) on the kerb side wheel to help maintain directional stability.
As a general rule of thumb it is recommended to adjust as follows: (Unless tyre wear dictates otherwise).

Independent Front Suspension vehicles will generally result in increased toe-in when raised.
Total Toe: +1mm to -1mm.
Solid Front Axle vehicles generally only allow toe adjustment.
Total Toe +1mm to -1mm
4 Wheel Independent Suspension vehicles will require a 4 wheel alignment to ensure front and rear wheels are true to the geometric centreline of the vehicle.
Rear Total Toe: +1mm to +3.5mm (Do not set with Toe Out)
Front Total Toe: +1 to -1mm
Optimal wheel alignment settings can vary between vehicles, the above is to be used as a guide only, different ride heights may require different settings. Always monitor tyre wear and pressures and adjust accordingly.

Installation Form

SUSPENSION INSTALLATION FORM IRONMAN 4X4

Please copy and complete this form at the time of installation.
Keep in a safe place for future reference.

Always ensure you have all the correct parts before beginning installation.

Installing suspension often requires special tools and expert knowledge. All fitment should be performed by a qualified and experienced fitter.
Always tighten bushed components after the vehicle is let down onto the ground at normal ride height, otherwise damage from torsional stresses can occur.

Ironman 4x4 recommends a wheel alignment after fitment of new suspension, consideration to natural spring settling should be taken into account before alignment is done.
Always adhere to vehicle manufacturers torque specification when tightening fasteners.
Always grease polyurethane bushes prior to fitment, Ironman 4x4 recommends a molybdenum based grease or grease specified for polyurethane.

If necessary, brake proportioning valve should only be adjusted and tested by a qualified brake specialist.
Further ADAS safety systems may need to be recalibrated by a qualified service technician.

NOTES AND COMMENTS

SUSPENSION MEASUREMENTS

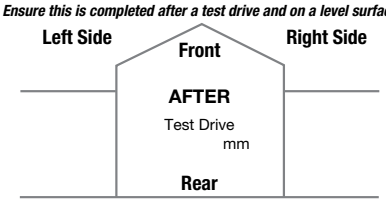

Actual Spring Measurements (mm)

Pre-Fitment Measurements (mm)
Rim to Guard

Post-Fitment Measurements (mm)
(After Product Fitment) Rim to Guard
Ensure this is completed after a test drive and on a level surface

POST INSTALLATION INSPECTION

☐ TICK All fitting, fasteners and wheels have been tensioned to the correct manufacturers specifications and marked with a paint pen where appropriate.

INSTALLERS NAME: _____ PRINT NAME

SIGNATURE: _____

DATE OF INSPECTION: _____

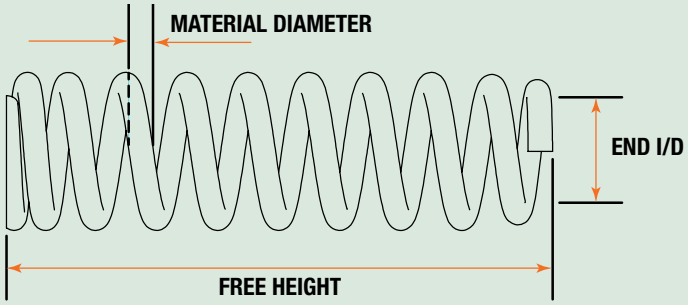

COMPLETED: _____ PRINTED FORM COMPLETED AND UPLOADED INTO ONLINE SUSPENSION FORM

All measurements to be taken prior to installation, immediately after initial test drive and again at 500km check.
All vehicle height measurements to be taken from lower of wheel rim to guard unless otherwise stated.
Up to 10mm height reduction in springs can be considered normal settling over time.
Suspension product warranty period is 4 years or unlimited km, GVM warranty period is 2 years or 40,000km unless otherwise stated.

Foam Cell Pro Struts feature a threaded body for ride height adjustment. Use IRONMAN 4X4, P/N# ISHOCKTOOL001 wrench when making adjustments. It may be neccessary to unload the spring tension before making adjustments.

When setting ride height use the OEM shock absorber as a reference for spring seat height, or refer table above.

Many independent suspension systems incorporating struts operate at a 2:1 motion ratio. For every 1mm of movement (compression or extension) at the strut, equates to 2mm movement when measured at the wheel. This MUST be considered when adjusting seat height. For example a 10mm seat height adjustment will provide 20mm change in ride height.

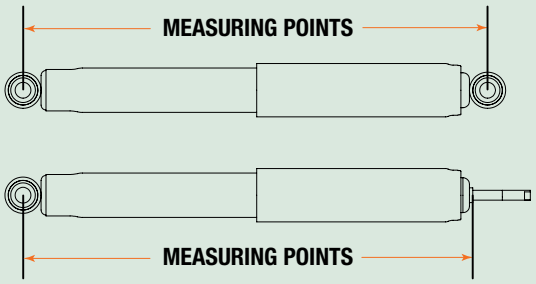

Independent suspension MUST maintain at least 60mm downward travel from ride height. Raising ride height too high can damage the suspension components, impair suspension operation and safety.

ISHOCKTOOL001 Multi-tool for shock absorber service and strut ride height adjustment

STRUT COMPRESSOR

Part No. IBSC7600

IRONMAN 4X4 Strut Compressor by Branick®

IRONMAN 4X4 have teamed with Branick to bring you the industry leading 7600 model strut compressor. The 7600 is the top of the line strut compressor and provides a safe and efficient way to assemble and disassemble struts.

Key Features:

- Increases workshop profitability
- Safer and easier than alternate methods
- Handles the heaviest 4WD struts
- Has long handles for extra torque
- Multi-position spring hooks
- Has a long compression stroke
- Does not require adapters
- Heavy duty acme thread
- Versatile mounting options
- All-steel construction
- Increase productivity
- Made in USA

IRONMAN 4X4 1 year IRON CLAD WARRANTY

IRONMAN 4X4

FAQ / Troubleshooting

Can I assemble struts at home?

In most cases, no. IRONMAN 4X4 recommend strut assembly be performed only by a qualified automotive mechanic using specialised strut compressor equipment.

Assembled struts store large amounts of sprung energy. Only mechanics with necessary tools and equipment should attempt to disassemble or assemble a strut. Mishandling of strut assemblies can result in severe injury or death.

Never loosen or remove strut centre top nut until all spring energy is retained within a high quality strut compressor.

The shock absorber appears to be leaking.

Upon initial use, there may be an oily residue or a small amount of oil originating from the rod seal and surrounding parts, this is referred to as manufacturing overflow.

Oil can be trapped in the seal during assembly and released during transport or initial operation. This is considered normal and should be wiped clean prior to installation or after first use. If oil continues to appear, the shock absorber may be leaking and it should be replaced.

The shock absorber does not self-extend with gas pressure.

IRONMAN 4X4 Nitro Gas shock absorbers will self-extend due to pressurised nitrogen gas contained within, the rate of gas extension offers little relevance in determining the health or performance of the shock absorber.

IRONMAN 4X4 Foam Cell shock absorbers will NOT self-extend like a gas pressurised shock absorber as they do not contain gas pressure - A Foam Cell shock absorber will generally feel firmer to extend than it will to compress.

If a gas shock absorber fails to self-extend, this may not indicate a problem, it may simply be due to a dry or dirty piston rod, firm valving resistance or due to low gas pressure design. This does not adversely affect performance.

Avoid removing the thin film of oil from the piston rod, it is required for smooth seal operation and lubrication. A light oil may be used to rejuvenate the seal if a squeak is present.

The shock absorber appears damaged.

All IRONMAN 4X4 shock absorbers are twin tube construction, this means they are very resilient to damage from rocks and debris. The outer tube can tolerate dents providing no puncture exists, the shock absorber will still function as intended.

Do not allow mud or debris to accumulate for extended periods around suspension components, clean and rinse as soon as practical.

Dust shields or rubber protective boots are provided by IRONMAN 4X4 to protect the piston rod from rock and debris damage.

Spare parts such as bushes, boots and dust shields are often available as spare parts if required.

The lower strut bushes have perished.

This is most likely as a result of the bushes being tightened without neutralisation.

Never tighten shock absorber bushes until the vehicle is lowered to the ground.

Leave eye ring mounts finger tight ONLY, until the vehicle is lowered to the ground at normal ride height, failure to do this can damage the rubber bond due to twisting resulting in premature bush wear.

This is particularly important for load bearing lower strut bush applications.

Once the vehicle is lowered to the ground, only then tighten to specified tensions.

Can I re-use my original rubber spring bushes?

IRONMAN 4X4 always recommends to renew leaf spring bushes with polyurethane when new springs are fitted. The extended range of travel provided by Ironman leaf springs and longer shock absorbers can over-rotate and damage the rubber material. In all cases when a silent block press fit bush is used, it cannot be transferred to an IRONMAN 4X4 leaf spring.

Original two-piece rubber bushes will fit IRONMAN 4X4 leaf springs, however it is not recommended. When greased, polyurethane allows greater rotational freedom on the shackle pins when compared to rubber.

Does polyurethane require re-greasing?

Yes, polyurethane bushes should be re-greased as part of a regular maintenance schedule.

IRONMAN 4X4 recommend a Molybdenum Disulphide based grease or other grease specified for use with polyurethane.

Can I use IRONMAN 4X4 shock absorbers with original springs?

Yes, in all cases. (Except those specified for racing or offroad only applications such as 4" or 6" lift). IRONMAN 4X4 design all suspension components to be compatible with OEM suspension components.

For optimal performance, IRONMAN 4X4 do recommend Ironman 4X4 shock absorbers are fitted as part of an integrated suspension system comprising IRONMAN 4X4 springs.

Can I use IRONMAN 4X4 springs with original shock absorbers?

Yes, in all cases. (Except those specified for racing or offroad only applications such as 4" or 6" lift). IRONMAN 4X4 design all suspension components to be compatible with OEM suspension components.

For optimal performance, IRONMAN 4X4 do recommend IRONMAN 4X4 springs are fitted as part of an integrated suspension system comprising IRONMAN 4X4 shock absorbers.

The springs appear to be sagging.

Refer to completed installation form to measure and compare with new ride height.

IRONMAN 4X4 design an array of different springs to suit different load applications. It is imperative the correct spring is selected for the expected loads.

Installing a spring which is too soft for the load will result in loss of expected ride height. Installing a spring which is too strong for the load will result in excessive ride height.

To properly determine whether a spring has sagged or is under-specified, the spring must be removed from the vehicle and free height checked against the original specification found in suspension catalogue.

Depending on spring size and rate, a loss of up to 10mm due to natural steel relaxation is considered normal.

Natural settling is expected within the first 2-3 months, after which the springs are expected to maintain height.

If a spring has lost more than 10mm free height from new, they may require replacement.

FAQ / Troubleshooting

The vehicle is leaning to one side.

Refer to completed installation form to measure and compare with new ride height.

If a vehicle is leaning down on one corner, firstly ensure the vehicle is on level ground and then assess the weight distribution to ensure even placement of load and accessories.

Many vehicle models exhibit an uneven weight distribution from factory, IRONMAN 4X4 adjust the spring height accordingly to level the vehicle.

Check if springs are designated for Drivers Side (D/S) or Passengers Side (N/S) and ensure they are installed to the correct location.

Typically the taller coils should be fitted to the heavier side of the vehicle.

The vehicle is leaning towards front or back.

Refer to completed installation form to measure and compare with new ride height.

Typically if the vehicle is level from side to side, but down at front or back, indicates incorrect spring selection. Check springs are correctly specified to match the load and accessories.

Vehicles which feature independent suspension are generally subject to a 2:1 motion ratio, meaning that for every 1mm of movement at the spring, the ride height is affected 2mm.

This is particularly important when assessing spring settling or sag. Natural settling of 10mm at the spring will result in 20mm setting of ride height. Settling of new rubbers and bushes should also be factored as they will contribute a few additional mm.

The shock absorber feels too soft or inconsistent when compressed.

Prime the shock absorber by fully pumping it upright 2-3 times, ensuring the pressure chambers are fully purged of gas or air bubbles.

The shock absorber will generally feel firmer to extend than it will to compress.

The ride height is too high or banging over bumps.

Independent suspension operates with limited wheel travel. IRONMAN 4X4 design springs to increase the ride height a prescribed amount within the safe limits of the original vehicles design.

If incorrectly specified springs or additional spacers are fitted, the ride height may be excessive causing the strut to reach its upper limit “top out” during motion.

As a general rule, IRONMAN 4X4 recommend a MINIMUM of 60mm downward travel available in the suspension, otherwise referred to as “droop”.

To establish ride height in relation to maximum height, a droop measurement will be required.

DROOP MEASUREMENT

1) Measure and record the vertical rim to guard distance with the vehicle on flat level ground.

2) Raise and support the vehicle with front or rear wheels hanging.

3) Measure and record the vertical rim to guard distance with the wheels fully hanging.

The difference between the two measurements is the amount of downward droop the suspension has available to it.

The minimum droop distance should be no less than 60mm fully settled.

If droop is less than 60mm, a reduction in handling performance will be experienced, possibility of damage to suspension, driveline and tyre wear can be a factor. In this case the ride height must be lowered.

There is a squeak coming from the suspension.

A squeak can originate from any number of sources or for many reasons. The most effective method to diagnose and resolve a squeak is to perform a systematic approach to locating the source. Make note of what conditions cause the squeak, ie. large bumps, small bumps, wet weather, cornering etc. Also note the type of noise whether it appears to be from a soft rubber / plastic origin or hard steel origin.

Attempt should be made to simulate the condition, such as bouncing the vehicle whilst listening to locate the source, it may be required to enlist a second person to bounce the vehicle whilst another accesses the underneath of the vehicle closely to pin point the exact location.

Typical sources for noise include:

Dry or broken bushes
Loose or misaligned components
Bent or damaged components
Steel to Steel friction
Under-tensioned bolts

The suspension appears to be rusty.

In many cases, damage to spring or shock absorber coating is unavoidable due to impacts with stones and debris. In some instances light surface rusting may appear on exposed steel if coating becomes damaged. This will not affect the performance of the product however may be unsightly. Take care when using a high pressure washer or strong chemicals during cleaning as this can further compromise the coating leading to greater exposure.

Care should be taken during installation to ensure components are not scratched or damaged which may result in exposure of the underlying steel.

Vehicles operating in salty environments may experience further accelerated surface rusting.

There is a vibration after fitting the suspension.

This is a known issue in some vehicles after ride height has been raised. It is caused by the change in angle within the driveline, most commonly in vehicles with 2 piece driveshafts.

In many cases where vibration is a common factor, IRONMAN 4X4 offer a solution such as a driveline spacer kit to adjust the angles of the driveshaft. The spacer kits are used to adjust the location of the centre bearing with view to reduce the vibration to a satisfactory level.

Each vehicle can vary in severity, some may not be fully rectified after the re-alignment. In such cases axle wedges or a reduction in ride height may be required.

Can I adjust the strut seat height?

IRONMAN 4X4 struts feature an adjustable height spring seat. 12xxx & 24xxx series struts utilise a trim packer system, 45xxx series struts utilise a threaded strut body.

Seat height cannot be adjusted whilst in vehicle, strut must be removed from vehicle with spring tension unloaded to enable adjustment.

The purpose of this adjustment feature is to allow recalibration of ride height following the installation of heavy accessories or to compensate spring settling.

Not to be used as a variable ride height system.

An increase in seat height beyond OEM specifications may result in excessive lift and non-compliance to state or federal laws.

A minimum 60mm suspension droop must be available at all times.

ACCESSORIES SPECIFICATIONS

Effective 1 June 2024

Bolting Pattern

WINCH TROUBLESHOOTING

Problem	Possible cause	Possible solution
Winch not operating	Flat battery in vehicle.	Replace or recharge battery. **NOTE:** Winch should always be connected to the main battery, not auxiliary battery.
	Flat battery in wireless remote controller.	Replace battery or use the plug-in controller.
	Winch has been wired incorrectly.	Check all wiring is correct as shown in the installation manual.
	Poor motor earth.	Make sure earth cable for the motor is connected to the main battery.
	Poor control box earth.	Make sure small earth wire for the control box is securely connected to a good earth (eg. Earth stud on winch motor).
	Wireless activator or the plug-in hand controller are not connected to control box.	Connect wireless activator or the plug-in hand controller to the control box, ensuring the hand controller is switched to the correct mode.
Hand controller will not operate.	Incorrect mode selected on hand controller.	Select wireless or plug-in mode on the hand controller.
Winch operates in wrong direction.	Cable spooled in the wrong direction on the drum.	Ensure the cable is spooled on in the direction as indicated on the winch housing.
	Winch has been wired incorrectly.	Check all connections to the motor are as shown in the installation manual.
Winch only opertates in one direction.	Winch has been wired incorrectly.	Check all connections to the motor are as shown in the installation manual.
Brake will not hold on hills.	Cable spooled in the wrong direction on the drum.	Ensure the cable is spooled on in the direction as indicated on the winch housing.
Clutch handle is difficult to rotate.	Load has not been released from cable.	Using the hand controller, spool cable out slightly to release the load from the cable.
Winch motor gets hot during winching.	This is quite normal.	Winch needs to be checked regularly during winching. If winch motor is uncomfortably warm to touch, cease operation until winch has cooled down.
Winch will not free-spool.	Clutch handle is in the 'Engage' position.	Rotate handle to the 'Disengage' position.
	Uneven winch mounting surface.	Ensure winch mounting surface is flat, not distorted and winch mounting bolts are tight.
Winch motor operates, but cable drum does not turn.	Clutch handle is in the 'Disengage' position.	Rotate handle to the 'Engage' position.

BULL BARS

IMPORTANT: IRONMAN 4X4 BULL BARS CONFORM TO AUSTRALIAN STANDARDS AS47861.1/2002

- Scanned in 3D to ensure a correct and accurate fit with a stylish, but dependable design
- IRONMAN 4X4 bull bars are tested for ADR, Airbag compliance and compatibility with vehicle safety systems
- Made from the highest quality of SPHC oil and pickled steel (not mild steel) for maximum strength and highest resistance to rust
- IRONMAN 4X4 bull bars are CNC laser cut, bent and robot welded for optimum accuracy and finish
- IRONMAN 4X4 designed and engineered to ensure Airbag compatibility
- Winch compatible and use a unique mounting cradle to remove excess weight from the bull bar
- Black powdercoating using AKZO NOBEL powder (YN100G) allows a thicker, smoother and more durable coating
- IRONMAN 4X4 designed aerial mount for quick installation and removal of an aerial
- Integrated spot light or light bar mounts

360° ROBOT WELDS

Wiring Looms Flowchart

WIRING LOOM ADD ONS

Part No	IBBPL	IPLS
Function	Bull bar parker / indicator and high beam trigger	High beam trigger
		
Description	Vehicle specific XX pin to 3 pin plug *Plug and play connection for bull bar indicators / parkers* *Allows for expansion with cube lights, driving lights or lightbars*	Vehicle specific XX pin to 3 pin plug *Allows for expansion of adding additional lights*

Part No	ILBWL001	IDLWL001	IDLWL002*
Function	Single lightbar	Scope 7” driving lights	Scope 9” driving lights
			
Description	1 x 2 pin plug *For adding a lightbar or work light*	2 x driving light 3 pin plugs and 1 x lightbar 2 pin plug *For adding Scope 7”driving lights*	2 x driving light 4 pin plugs* and 1 x lightbar 2 pin plug *For adding Scope 9”driving lights*

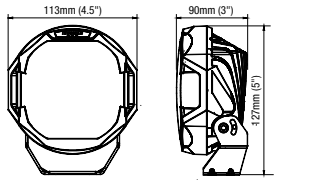

IDLWL003R	2 pin to 2 pin 2.5m extension *For adding roof or rear mounted lightbar*	
IDLW004E	2 pin to 2 x 3 pin Scope 7” plug *For adding additional Scope 7” driving lights*	
IDLWL006M	2 pin to 2 x 2 pin plugs *For adding additional lights ie. Cube, Blast, small lightbars or work lights*	
IDLWL007C	3 pin to 2 pin reducer plug *For adding a single cube light from a Scope 7” plug*	
IDLWL008C	3 pin to 2 x 2 pin reducer plugs *For adding two cube lights from a Scope 7” plug*	
IBBPL001P	IBBPL plug to 2 x 2 pin *Indicator / parker strip light loom for some Raid bull bars*	

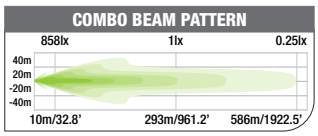

*** Important Note: Scope 9” driving lights require 1 x IDLWL002 loom for each pair added to a vehicle**

Fridges and Fridge Troubleshooting

FRIDGE ERROR CODES

EXISTING AND SUPERSEDED FRIDGE RANGE

Code	Error Type - Refer to User Manual for further information	Possible solution
E1	Battery protection stop auto cut-off (Battery too low or adjust protection setting)	Set battery protection to lower setting.
E2	Fan fault (Check clearance around the fan)	Check for fan obstructions.
E3	Compressor motor starter error (Low voltage power supply)	Check available voltage of 12/24V power supply, check all connections between battery and fridge, check condition of plug in lead.
E4	Compressor motor running speed error (Overloaded motor cannot maintain 1850 times / min which is the lowest speed)	Return to place place of purchase for assessment.
E5	Compressor has overheated (Check clearance around the fan)	Check for sufficient air flow clearance around fridge.
ER1	Control panel and temperature probe fault	Replacement of control panel or temperature probe.

METAL / DRAWER FRIDGE RANGE

Code	Error Type - Refer to User Manual for further information	Possible solution
ERR01 / E1	Battery cut-out activated	Check source voltage is above the set cut-out level and adjust as required. Check operation on another power source.
ERR02 / E2	Cooling fan issue	Call IRONMAN 4X4 Customer Service.
ERR03 / E3	Compressor start-up issue	Remove fridge from power source and wait 10 mins before reconnecting. Try connection to an alternate power source. Potential control system issue, contact IRONMAN 4X4 Customer Service.
ERR04 / E4	Compressor speed too low	Remove fridge from power source and wait 10 mins before reconnecting. Try connection to an alternate power source. Move unit to a lower ambient temperature area. Clean and verify all vents are clear to ensure uninterrupted air-flow across compressor and cooling system.
ERR05 / E5	Extreme ambient temperature	Move unit to a lower ambient temperature area. Clean and verify all vents are clear to ensure uninterrupted air-flow across compressor and cooling system.
ERR06 / 07	Thermostat failure	Call IRONMAN 4X4 Customer Service.

Unit will not turn on

- Check power supply ie. Battery voltage (See Battery Protection table in User Handbook)
- Check all connections between battery and fridge
- Check condition of fuse
- Check that the unit is turned on

Poor refrigeration performance

- Too much food has been placed inside refrigerator
- Temperature of food placed in fridge is too high
- The door is not closed properly
- Door seal is broken

Poor cooling

- Make sure adequate ventilation room is left around unit (See General Notes in User Handbook)
- Ambient temperature is extremely high
- Temperature is not set correctly

Contents of fridge are freezing

- Temperature setting is too low

Noise

- Unit is not on a flat or level surface
- Check for vibrations in surrounding objects

Sound of water from inside of unit

- This is normal due to flow of refrigerant

FRIDGE FAQ's

Q. Where can I find a list of the fault codes? ***A. See User Handbook (or above)***

Q. Why is my fridge freezing everything? ***A. Temperature is set to degrees Fahrenheit, reset to degrees Celsius***

Q. My fridge will not turn on? ***A. Hold On/Off button until the display illuminates***

Q. My fridge isn't staying on? ***A. Check the battery protection setting, and ensure it is set correctly by referring to your User Handbook***

Fridges and Slides

FRIDGE / FREEZERS

40L (10.5GAL) ICECUBE FRIDGE / FREEZER DRAWER - IFRIDGE40LMDR

Overall Dimensions	766(L) x 308(H) x 536mm(W) 30.2(L) x 12.1(H) x 21.1"(W)
Weight	22kg (48lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

30L (7.9GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE30SP

Overall Dimensions	590(L) (650mm with handle) x 380(H) x 340mm(W) 23.3(L) (25.6"mm with handle) x 15(H) x 13.4"(W)
Weight	18kg (35lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

40L (10.5GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE40SP

Overall Dimensions	590(L) (650mm with handle) x 440(H) x 350mm(W) 23.3(L) (25.6"mm with handle) x 17.4(H) x 13.8"(W)
Weight	20kg (37lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

50L (13GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE50SP

Overall Dimensions	590(L) (650mm with handle) x 520(H) x 350mm(W) 23.3(L) (25.6"mm with handle) x 20.5(H) x 13.8"(W)
Weight	22kg (41lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

43L (11GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE43LM

Overall Dimensions	630(L) x 517(H) x 365mm(W) 24.8(L) x 20.4(H) x 14.4"(W)
Weight	25kg (56lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

65L (17GAL) ICECUBE DUAL ZONE FRIDGE / FREEZER - IFRIDGE65LDZM

Overall Dimensions	800(L) x 470(H) x 475mm(W) 31.5(L) x 18.5(H) x 18.7"(W)
Weight	29kg (63.9lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

70L (18GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE70LM

Overall Dimensions	800(L) x 470(H) x 475mm(W) 31.5(L) x 18.5(H) x 18.7"(W)
Weight	25kg (56lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

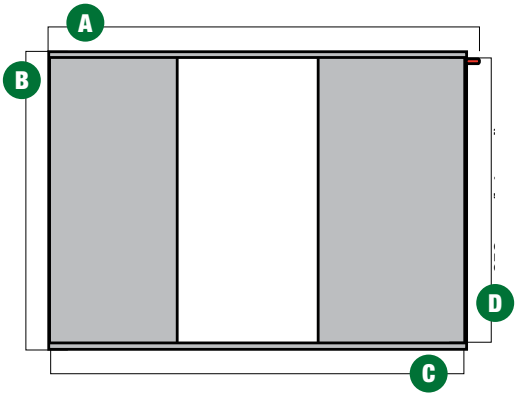

65L (17GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE65SP (SUPERSEDED MODEL)

Overall Dimensions	820(L) x 495(H) x 490mm(W) 32.3(L) x 19.5(H) x 19.3"(W)
Weight	33kg (66lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps

74L (19.5GAL) ICECUBE FRIDGE / FREEZER - IFRIDGE74SP (SUPERSEDED MODEL)

Overall Dimensions	820(L) x 495(H) x 490mm(W) 32.3(L) x 19.5(H) x 19.3"(W)
Weight	32kg (66lb)
Temperature Range / Regulation	+10˚C to -18˚C (+50ºF to -0.4ºF)
Power Draw	4.5Amps
